- Negative
  — Customer expresses dissatisfaction, reports a problem, or uses sarcasm to criticize.
- Mixed

110 reviews classified; each review has exactly one label.
Customer service takeaway: Negative reviews make up the largest group. The most important concerns include premature product failures, connectivity issues, misleading product descriptions, and safety problems with the electric kettle. The mixed reviews reveal opportunities to improve products that customers otherwise appreciate.

Sarcastic reviews such as R022, R024, R030, R066, R068, R078, R080, R085, and R108 are classified as negative because their underlying meaning is dissatisfaction, despite apparently positive words.

Analysis:

- Techniques Used: All of them in version 2.
- Yes overall, all of the techniques improved the final output in Version 2. For example, the Output format added a table instead of just a summary of the result and a breakdown as seen from Version 1's screenshot.
- The model handled sarcasm and mixed opinions well, and didn't need any changes after the 2nd prompt. As for unclear review, they were part of neutrals since it's neither bad or good or even mixed.
- It labeled everything the second prompt
- Output Format made the biggest difference since before this the model was not even explaining why it picked the rating of each review.
