Water bottle INPUT: Write a product description for a water bottle.

Claude AI output: Hydra Peak Insulated Water Bottle

Stay refreshed from sunrise to sunset with the Hydra Peak, a water bottle built for everyday adventures.

Crafted from double-wall vacuum-insulated stainless steel, it keeps drinks ice-cold for up to 24 hours or piping hot for up to 12. The powder-coated exterior gives you a confident, non-slip grip, and it won't sweat or leave rings on your desk, car console, or gym bag.

The leakproof, flip-top lid opens with one hand and locks securely closed, so you can toss it in your backpack without a second thought. A wide mouth fits standard ice cubes and makes cleaning easy, while the integrated carry loop makes it simple to clip onto a pack or hold on the move.

Features

- 24 oz (710 ml) capacity
- 18/8 food-grade stainless steel, BPA-free and phthalate-free
- Fits most cup holders
- Dishwasher-safe
- Available in Glacier Blue, Matte Black, Forest Green, and Sunset Orange

Whether you're commuting, hiking, or powering through a long workday, Hydra Peak keeps your water exactly how you like it. Fill up, head out, and stay hydrated.

If you'd like, I can tailor this for a specific brand, tone (playful, premium, eco-focused), or platform like Amazon or Shopify.

Analysis: This response shows the AI took a marketing route and tailored the description to a customer, even though that wasn't specified. I didn't expect it to be this detailed, though, including features and a hook to grab customers' attention. It's missing things like the water bottle's shape and in-hand comfort, and it's also a bit wordy for a regular shopper, which is understandable given the basic prompt. Some of the features it creates, like 18/8 food-grade stainless steel, BPA-free, and phthalate-free, include things everyday people might not know, so they might not sell to everyone.

Improved INPUT: You are starting your own water bottle business, and you're not an expert, but you still want to sell. I need you to write a product description for a water bottle. Tailor it to moms scrolling through social media like Facebook. Don't make it too wordy about 50 words or less. Use a friendly tone and a high school reading level. You can choose the features, but I want to include glow-in-the-dark so it's easier to find. Here's an example of what I want: Is your family in

need of an innovative water bottle? We got you. This water bottle is made for you, with features that make your drinking experience much better.

Claude AI output: Tired of losing your kids' water bottles? 💧 Ours glows in the dark, so you can spot it in a dark car, a messy backpack, or a bedroom at night. It's leakproof, easy to clean, and tough enough for school, sports, and road trips. Grab one for everyone in your family!

Analysis: My use of constraints and role prompting made this response simpler and less wordy, but it left out some of the features it had before. But using context made the AI cater to mothers who want to keep their family hydrated. I feel like my use of few-shot prompting was ignored because it was so basic. I can't say either description is better, but now that it targets a large demographic, most people will understand these features.

Smart thermostat INPUT: You are a writer hired to write an Amazon description for a Smart thermostat.
Write a description of the thermostat, marketing it to dads who own a home, that includes these features and more:

- Air quality monitor
- Occupancy detection
- Siri and Alexa support
- Wifi 7
- Surround sound speakers
- Bluetooth

It should also have a professional tone and be 70-80 words.

Claude AI output: Take Command of Your Home's Comfort

Designed for the man who takes pride in his home, this smart thermostat delivers precision climate control with effortless convenience. Its built-in air quality monitor safeguards your family's health, while occupancy detection trims energy costs by heating and cooling only when needed. Control it with Siri or Alexa, enjoy blazing-fast Wi-Fi 7 connectivity, and stream music through integrated surround sound speakers via Bluetooth. Smarter savings, healthier air, and total control. Upgrade your home today.

Analysis: My use of context made the AI cater to males, framing it almost as protecting and keeping their families satisfied. Using role prompting as a writer kept the AI from using playful words or emojis, and constraints kept it professional, short, and simple at 76 words.

Ergonomic office chairs INPUT: You are a TikToker trying to earn commission by selling ergonomic office chairs to gamers and office workers.

In this scenario, you are in charge of writing the description to sell these office chairs. The chairs feature:

- a leg rest
- easily replaceable parts
- handle 300+ pounds
- comfortable
- spine and posture support

I want you to create an enticing, enthusiastic description for you or your friend to say on TikTok.

For example, I'm looking for something like this: Does your back or butt hurt while working or gaming? This chair offers a bunch of great features that solve all your problems.

Claude AI output: Does your back or butt hurt after hours of working or gaming? Say goodbye to that pain, because this chair is about to change your whole setup! 🙌It has a built-in leg rest, so you can fully recline and kick back during a long grind or a boss fight. The spine and posture support keeps your back happy, so you're not slouching like a shrimp by hour three. 🦐 And it's SO comfortable, you'll forget you're even working. 😌Here's the best part: every piece is easily replaceable. Armrest wears out? Swap it. No need to toss the whole chair and start over. 💪 It also handles 300+ pounds, so it's sturdy, built to last, and made for everybody. Whether you're clocking in or queuing up, your body deserves better than that old wobbly chair. Click the link and upgrade your spine today! 🛒✨

Analysis: The use of few-shot prompting here made the AI follow what I wrote for the intro almost identically. My use of role prompting here, telling Claude to be a TikToker, brought out more of a goofy side, causing it to use a bunch of emojis and funny wording. Lastly, the use of constraints made the AI use enthusiastic wording and exclamation marks.
