Link to water bottle prompt
https://claude.ai/code/cshk_013hXoiAdn1Q4DrtvQ7MrGt11WCp9XMvMn5vGLTT4Y9kbH

I used Haiku 5.5 on medium effort. The initial output the ai gave was good but overall it was a very generic description that you could probably find on Amazon or Walmart

I refined the prompt using Role prompting, context, and constraints to enhance the product description. I told the AI to act as a product manager who is selling water bottles in the Northeastern United States and that there is limited supply for the product. These changes made the AI use region specific terms such as referencing how the water bottle can keep a drink cold in the summer in Cape Cod. The AI also attempted to generate FOMO by mentioning the supply won't restock until the next season.

This was my initial prompt and response

Write a product description for an Ergonomic office chair

1 hour ago

Initialized session

Ergonomic Office Chair

Work longer without the back pain. This chair supports your spine, adjusts to your body, and keeps you comfortable from the first meeting to the last email of the day.

Support that moves with you
A contoured lumbar support fits the natural curve of your lower back. Adjustable height, seat depth, and armrests let you set the chair to your body, not the other way around. The breathable mesh back stays cool and flexes with every shift in posture.

Designed for all-day sitting
A waterfall-edge seat takes pressure off the backs of your thighs. The tilt mechanism lets you recline with the backrest and lock it at the angle you prefer, so you can rest between tasks without losing support.

Built to last
A reinforced steel base and a 300 lb weight capacity mean it holds up to daily use. Smooth-rolling casters are gentle on hardwood, tile, and carpet alike. Every part is easy to reach, so you can adjust it in seconds.

Easy setup
Assembly takes about 20 minutes with the included tools and clear step-by-step instructions.

What's included

- Ergonomic chair with adjustable lumbar support
- Height, seat depth, and armrest adjustments
- Tilt lock with recline control
- Five-star base with dual-wheel casters
- Tools and assembly guide

Specifications *(replace with your product's actual figures)*

- Dimensions: 26" W × 27" D × 44–48" H
- Seat height: 17–21"
- Weight capacity: 300 lbs
- Materials: Breathable mesh, high-density foam, steel base, nylon casters
- Warranty: 5 years

I wrote this with a placeholder name and specs. If you tell me the product name, price point, target customer (remote workers, gamers, or a corporate buyer, for example), and the real measurements, I can tailor the tone and details. I can also write a shorter version for a product listing or a longer one for a website.

Similar to the water prompt, the AI gave a very generic description.

I want this description to appeal to gamers as well, with color options that gamers typically like. You can also include add-ons for the chair that would appeal to gamers.

Ergonomic Gaming Chair

Level up your comfort. Built for marathon sessions, ranked grinds, and everything in between, this chair keeps your back supported and your focus locked on the match.

Support for long sessions
A contoured lumbar support keeps your spine aligned through hours of play. A high-density foam seat with a waterfall edge takes pressure off your legs, and the breathable mesh back keeps you cool when the match gets intense. Adjust height, seat depth, and armrests in seconds, then lock the 165° recline for quick breaks between rounds.

Built for the grind
A reinforced steel base and a 300 lb weight capacity handle daily sessions, tournament weekends, and everything in between. Smooth-rolling casters glide across hardwood, tile, and carpet without scuffing your floors.

Style that stands out
Choose the color that fits your setup. Every option comes with matching stitching and accent details.

Level-up add-ons

- **RGB Lighting Kit:** Sync the chair's underglow with your PC or console, or set your own color scheme. Includes a remote and app control.
- **Memory Foam Headrest Pillow:** Supports your neck during long sessions and attaches with a magnetic clip-on design.
- **Detachable Lumbar Pillow:** Adds extra back support when you need it, and removes easily for a clean look.
- **Controller and Headset Hooks:** Keep your gear within reach and off the floor. Mounts to either armrest.
- **Under-Desk Cable Tray:** Hides cords and keeps your setup clean.
- **Built-in Speakers Bundle:** Bluetooth speakers in the headrest for immersive audio without a headset.

What's included

- Ergonomic gaming chair with lumbar support
- Adjustable height, seat depth, and armrests
- 165° tilt lock with recline control
- Five-star base with dual-wheel casters
- Tools and assembly guide

Color options

- **Stealth Black:** Matte black with black stitching. Clean and understated.
- **Crimson Racer:** Black with red accents and red stitching. Built for the racing-game look.
- **Neon Blue:** Black with electric blue accents and matching stitching.
- **Arctic White:** Clean white with silver accents. Pairs well with white or light-themed setups.
- **Toxic Green:** Black with neon green accents for a bold, high-energy look.

Specifications *(replace with your product's actual figures)*

- Dimensions: 26" W × 27" D × 44–48" H
- Seat height: 17–21"
- Recline: 90°–165°
- Weight capacity: 300 lbs

In my second prompt, I wanted the AI to focus on marketing the chair to gamers so that the product has a better target audience and appeal. In the description the AI does a good of

making a description for a chair that gamers would like. It also included some useful add-ons that gamer chairs usually have and it included different color options that gamers typically like.

review the production description you just made from the perspective of a gamer looking for a chair. Are there any revisions you would make to the description?

Yes. Reading it as a gamer shopping for a chair, I'd make these changes:

1. Flag the invented features before anything is published. The specs were placeholders, but I also wrote features as if they were real: the Bluetooth speaker headrest, RGB app control, the magnetic headrest clip, and the 5-year warranty. I should have marked those as well. Confirm each one exists, or cut it.

2. Include the headrest. Most gaming chairs ship with a headrest, and shoppers compare them that way. Listing the headrest as a paid add-on will make the base price look worse than competing listings. Include it, and offer the memory foam upgrade as an option.

3. Cut the speaker bundle. Gamers who use headsets won't want speakers in the headrest, and they'll be skeptical of Bluetooth audio on a chair. It reads as a gimmick and adds cost and failure points. If you keep it, describe it specifically: driver size, connection type, and battery or power requirements.

4. Drop the redundant lumbar pillow. The chair already has built-in lumbar support, so a separate detachable pillow confuses the offer. Keep the lumbar support in the main description and remove the add-on, or explain when someone would need the pillow.

5. Replace vague copy with gamer-specific facts. Phrases like "Built for the grind" and "Level-up your comfort" sound like marketing copy. Gamers want to know:

- **Armrest type** (2D, 3D, or 4D) and how far they move
- **Seat cushion firmness** and the foam density
- **Upholstery:** PU leather or mesh? Gamers often prefer PU leather for the look, but it can get hot. Say which one it is.
- **Recline tension** adjustment and lock positions
- **Height range** for the user, not just the chair. Gamers search by height.
- **Weight capacity** and the tested or rated standard behind it

6. Use the color options as a selling point. Each color should name a setup or game style, not just describe it. "Crimson Racer" works well for racing fans. For the others, say which games or setups each one suits.

7. Ease off the "level up" language. It shows up too often. Gamers respond to clear specs and honest claims more than to hype.

8. Add a short "Who this is for" section. Name the use cases directly: long ranked sessions, console players who sit close to the TV, streamers who need a clean look on camera. This helps shoppers decide quickly.

9. Add an assembly time and a compatibility note. Gamers often ask whether a chair works with a desk, a rug, or a particular room. A line on assembly time and floor-safe casters answers that.

Do you want me to revise the full description with these changes? I'd need you to confirm the features and specs first, so the copy doesn't promise anything the product doesn't deliver.

Revise the full description with these changes

Ergonomic Gaming Chair

Built for long ranked sessions, tournament weekends, and late-night grinds. This chair keeps your back supported and your focus on the match.

Who it's for

- **Ranked grinders** who play for hours and need support that holds up
- **Console players** who sit close to the TV and want a stable, adjustable seat
- **Streamers** who want a clean, premium look on camera

Comfort for long sessions
A contoured lumbar support follows the natural curve of your lower back. The seat uses [foam density] high-density foam with a waterfall edge to take pressure off your legs. The [breathable mesh / PU leather] back keeps you comfortable through intense matches. The chair includes a headrest, so your neck stays supported without extra purchases.

Adjustments that matter

- **Armrests:** [2D / 3D / 4D] with [range] of movement
- **Recline:** 90° to 165°, with adjustable tilt tension and lock positions
- **Seat:** Adjustable height and seat depth
- **Fit:** Designed for users [height range]

Built to last
A reinforced steel base and a [weight capacity] rating handle daily sessions. Smooth-rolling casters are gentle on hardwood, tile, and carpet. Assembly takes about [assembly time] with the included tools and guide.

Color options

- **Stealth Black:** Matte black with black stitching. Clean and low-key. Suits any setup.
- **Crimson Racer:** Black with red accents and stitching. Made for racing fans and bold setups.
- **Neon Blue:** Black with electric blue accents. A strong match for blue-lit rigs and sci-fi games.
- **Arctic White:** White with silver accents. Pairs with light-themed or minimalist desks.
- **Toxic Green:** Black with neon green accents. Eye-catching for fans of high-energy shooters and arcade titles.

Add-ons

- **RGB Lighting Kit:** Underglow lighting with a remote [and app control, if confirmed]. Works with [compatible setups, to be confirmed].
- **Premium Memory Foam Headrest:** An upgrade from the included headrest, for extra cushioning during long sessions.
- **Controller and Headset Hooks:** Mounts to either armrest to keep your gear within reach and off the floor.
- **Under-Desk Cable Tray:** Hides cords and keeps your setup clean.

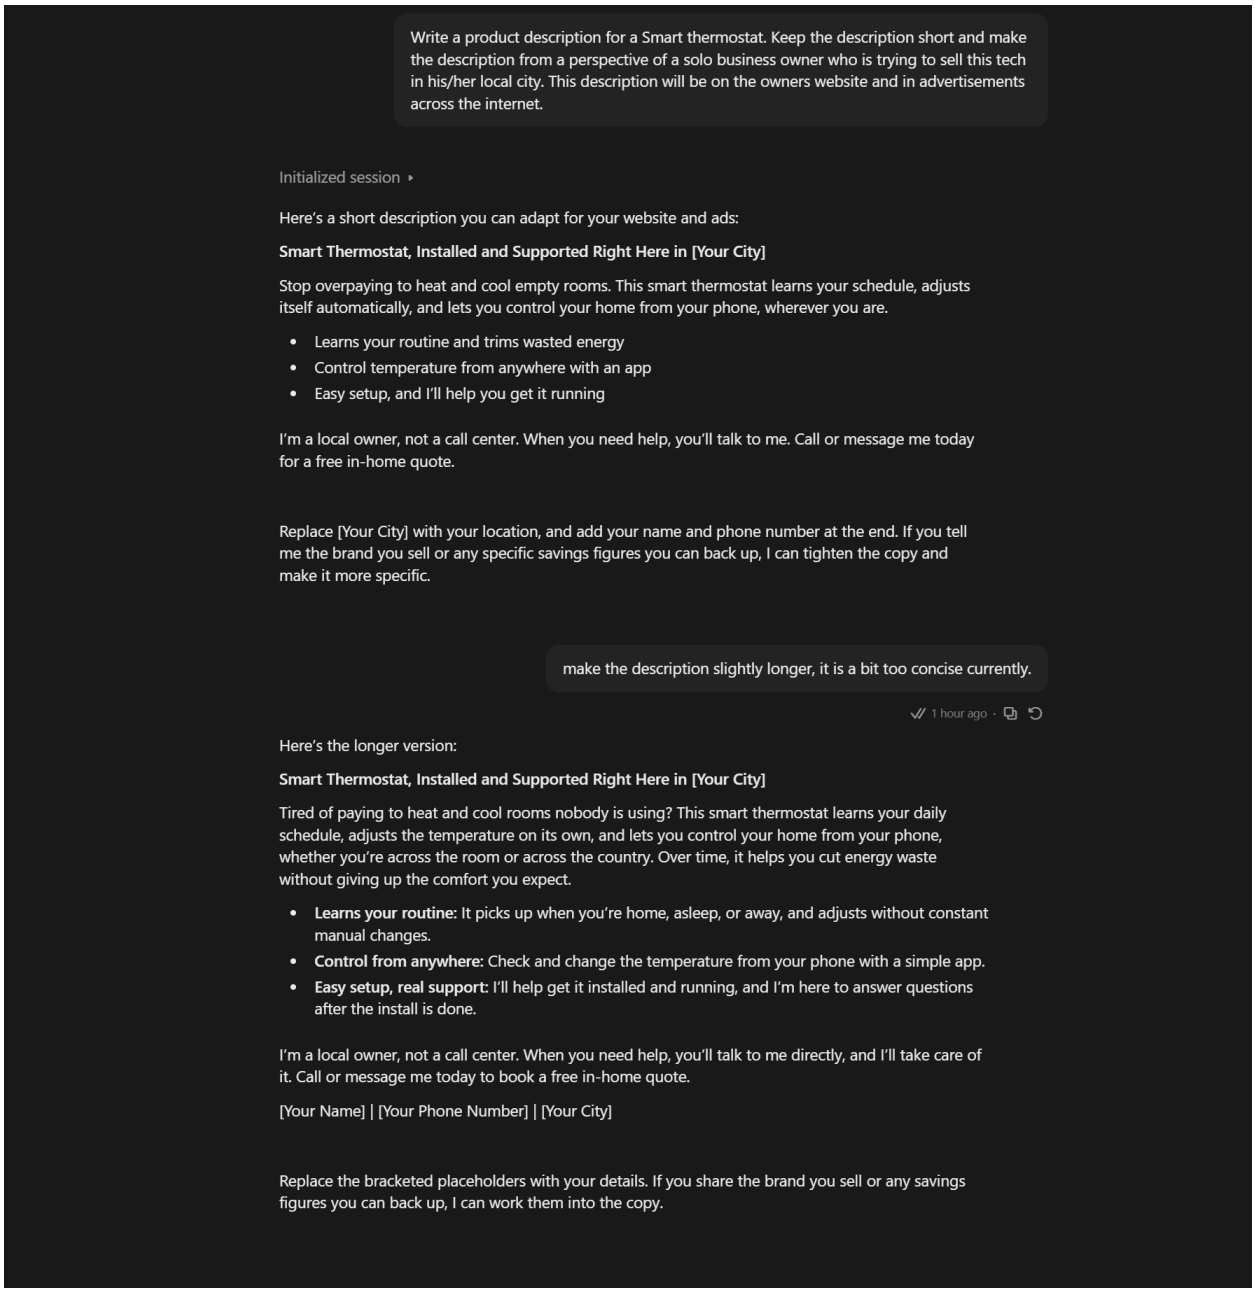

What's included

- Ergonomic gaming chair with lumbar support
- Headrest
- Five-star base with dual-wheel casters

Then I told the ai to review the description from the perspective of a gamer who looking for a gamer chair, so that it could further refine the description. It found some useless add-ons that didn't really improve on the value proposition of the chair. Then I told the AI to refine the

description with its newly found information. The final description is very focused on competitive gamers who would a chair that they would sitting for a long period of time, that offers comfort and add-ons that gamers would find useful if they wanted them.

Link to Smart Thermostat Prompt.
https://claude.ai/code/cshk_013hXoiBGw9wLGecJzNCQhC75ttnP4yhJdokMzeTnaqS9b

For the initial prompt I used role prompting, context, and constraints right off the bat. I told the AI to pretend to be a solo business owner who is trying to sell their smart thermostat in their local city. Then I told the AI that the product description should be concise and that this description would on the owner's website and on online advertisements across the internet. The product description it gave me was very short, too short in opinion. But the description do feel like it was made by someone who local to a city and was a no nonsense person. I told AI to make the description slightly longer, which I felt was to better for a short advertisement/product description.
