Here is the link to my prompts:
https://claude.ai/code/cshk_013hXoi8DH4D2SFNeMTfJN1WCtQDbVH7p7CQ5zxURYk24H

I did the initial prompt, but since I'm on a paid plan with Claude, the AI actually did a lot work without me actually giving enough context to it. It assessed each review individually and scored/ranked them without me asking. I was using Haiku 5.5 for this, which surprised because Haiku and Sonnet historically didn't do this thing as much in the past.

In my second prompt I told the AI to display every review in the chat with the classification it gave to each one, with a short explanation on it made its decision. It didn't go back and change any of its responses which told the AI actually review each one originally and it told me that the AI was confident in the assessment it gave each review.

I chose the first ten reviews from the csv to see if I agree with the AI and I agree with the AI on every single choice it made. It even was able to recognize sarcasm which is something models from a year ago weren't able to do well. This really surprised me because Haiku is the smallest and "dumbest" Claude model there is and it did such a good job here.

A fun fact, the session cost for this output was 1 cent.
