Tyler Pyrzenski

Part 1:

Water Bottle Prompt V1: "Write a product description for a water bottle."

Response:

Everyday Steel Bottle, 24 oz

"Cold water stays cold for 24 hours and hot coffee stays hot for 12. The double-wall stainless steel doesn't sweat, so your bag and desk stay dry.

The leakproof lid seals tight enough to toss the bottle in a backpack sideways. The wide mouth fits ice cubes and is easy to scrub clean, and the whole bottle goes in the dishwasher. It doesn't hold onto old flavors, so this morning's coffee won't show up in this afternoon's water.

It fits most car cupholders and has a carry loop for days when your hands are full. It's BPA-free and built to take dents and drops without breaking down.

Comes in 6 colors.

I made up the size, insulation times, and features. Send me the real specs, the brand, and where it's going (Amazon listing, Shopify page, Instagram caption) and I'll rewrite it to fit."

General Thoughts:

Honestly, I think that Claude did a great job giving a descriptive response with only a generic prompt. The answer took matters into its own hands when choosing which type of water bottle along with the size it will use but it also offered to change it at the end. Overall, I think it wrote a description to generate sales, giving FOMO which is great for sales. It is missing the actual type of bottle we want a description of, which could be entirely wrong if we were referring to a Dasani water bottle. It is written for an amazon description for sure.

Part 2:

To keep this experiment steady across all tests, I am going to make a new chat for each prompt. For this one, I am going to aim to generate a sales technique to sell to Gen Z with a new eye catching water bottle. The prompt will aim towards a specific audience so the response should fit our lingo and general way of speaking.

Techniques Used (2):
Context - Constraints

Water Bottle Prompt V2: *"Write a product description for a water bottle.*

Follow the guidelines below before formulating a response, ensure you are referring back to these guidelines while writing -

Bottle stats:

- *Water bottle: 24 OZ*
- *Colors: Red, White, Blue, Black, Orange*
- *Leakproof*
- *Holds cold/hot for 48hours*
- *Fits in generic cup holders*
- *Stainless Steel*

Target Audience: Gen Z (Age 18-28) (Females & Males)

For what?: Instagram ad (Story / Timeline Post)

This is an ad to sell the waterbottle, ensure that it catches Generation Z's attention with their short attention span, use their lingo, and match their way of wording stuff.

Avoid using commonly written AI words / phrases that would flag us for AI usage.

The tone of the message should be direct, informational, and relatable."

Response:

"Here's a Story version and a feed post version, since they work differently.

Story (one line per frame, on-screen text)

1. *your water bottle leaked in your bag again didn't it*
2. *24 oz. stainless steel. actually leakproof.*
3. *ice still in it 48 hrs later. coffee still hot too.*
4. *and it fits in your cup holder. finally.*
5. *red, white, blue, black or orange. tap to grab yours* 👇

Feed post caption

pov: you open your bag and nothing's soaked 😳

24 oz of stainless steel that keeps cold drinks cold and hot drinks hot for 48 hours. not 4. forty-eight.

✓*leakproof, so you can throw it in your bag and forget about it*
✓*fits regular cup holders (yes, the small ones)*
✓*comes in red, white, blue, black and orange*

your iced coffee from 2pm today is still iced at 2pm tomorrow. kinda crazy ngl

link in bio. which color are you getting? 👀

The all-lowercase is on purpose. That's how Gen Z writes captions, and a fully capitalized, perfectly punctuated ad gets scrolled past. I also left out em dashes and words like "elevate" and "game-changer," since those are the biggest giveaways that AI wrote something. If the brand voice needs to be a little cleaner, capitalize the first word of each line and keep everything else"

General Thoughts:
This response was not expected as it firmly took the theme on the Instagram story and timeline post very serious. It did not create one common thing to use across both of them, but rather it gave two entirely separate approaches. It did do pretty good with the gen z way of talking with the emojis and the common trends online such as "pov...".

Techniques Used:
Few-Shot Prompting

Water Bottle Prompt V3: *"I am going to give some short example descriptions of a water bottle. You are then to follow my pattern and generate the best mixture of the few.*

Ex 1:

The new... stainless steel.... leakproof and eye catching waterbottle! The stocking stuffer of the season. Everyone needs a drink right?

Ex 2:

Take a journey to the waterfalls of Alaska to taste glacier fresh water straight from the source... or just take a sip from Tyler's new waterbottle!....

Ex 3:

Three sizes. Twelve colors. Millions satisfied. Join the bottle crew!"

Response: *"Picture this… ice-cold water straight off an Alaskan glacier… or just a sip from Tyler's new stainless steel, leakproof bottle! Three sizes. Twelve colors. The stocking stuffer of the season. Everyone needs a drink, right? Join the bottle crew!"*

General Thoughts: Claude took a great path here on connecting all three of my examples and letting it pioneer its own response with a collaboration of all of my examples. This time, it did not come up with any suggestions for me in the end. It simply provided what I asked and that was it. This was the first time this has happened with all of the prompts.

Between V2 and V3, I think V2 provided a much more tailored response to the product because the prompt had a lot more direction. V3 simply combined my three paragraphs and delivered with no follow up or suggestions or questions for clarity on the product. In the end, V2 was the winner of the three with a lot better of a response among the few.

Part 3:

Coffee Prompt V1: "Write a product description for a monthly coffee subscription."

Response:

"The Monthly Pour

Good coffee shouldn't depend on remembering to buy it.

Every month, we send you a fresh bag of specialty coffee from a small-batch roaster we actually like. It's roasted within days of shipping, so it shows up at its best instead of sitting on a shelf for weeks. Each bag comes with a card covering where the beans were grown, who roasted them, and what you'll taste, whether that's bright and citrusy or deep and chocolatey.

What's in the box

- *12 oz of freshly roasted, single-origin or seasonal blend coffee*
- *Whole bean or ground to match your brew method (drip, pour-over, French press, espresso)*

- *A tasting card with origin details and brewing tips*

How it works
Pick your roast preference and grind, and we handle the rest. Skip a month, swap your grind, or cancel anytime. No contracts, no hoops.

$18/month · Free shipping

It's for people who want to drink better coffee without turning it into a research project. You also end up trying beans you'd never have picked off a grocery store shelf.

I made up the bag size, price, and roast-window details, so swap those for whatever's real. If you tell me who it's for (a specific roaster, a gift angle, an Etsy or Shopify listing), I can tighten it up or do a short version for social posts."

General Thoughts:

The response to this one was honestly exactly something I would expect from this simple of a prompt. IT took the generic criteria needed for a good running coffee shop with an app and worded it out basically to an MVP. It had no information on the coffee shop, so it just gave the simplest examples with instructions on how the subscription works.

Coffee Prompt V2: *"You are the advertising / marketing agency of a popular local coffee shop in downtown Wilmington North Carolina called The BeanBag.*

We are now implementing a monthly coffee subscription for users who pay $5/month to our patron supporting local businesses. The money is reinvested into the shop and the patrons are allowed to collect coffee cup puzzle pieces in the app and when they collect 7 they unlock a free coffee with a pastry.

Constraints:

- *Output no longer than 200char*
- *Tone: Fit the calm presence of a coffee shop, targeting ages 16-28 (others as well)*
- *Should read across easily with lower difficulty vocabulary.*
- *Avoid common AI generic phrasing.*

Output Format:

Output should be ready for use across all social media platforms, and all messages are going to be the same message sent across them all. no need for multiple copies. Format should be correct for use across all platforms as well (1 final form. do not make one form for each)"

Techniques Used:

Role Prompting – Constraints - Output Format

Response: *"Your coffee can do more. Join The BeanBag club for $5/month and every dollar goes back into the shop. Collect 7 cup pieces in our app and your next coffee + pastry is on us. 🫘 #WilmingtonNC*

That's 189 characters, so it fits under the 200 limit. It's plain text, with one emoji and one hashtag that display the same on every platform. If you'd rather call members "patrons," swap "club" for "patron program." That adds 6 characters and still fits."

General Thoughts: I like this. I think it pretty good with balancing what belongs and what can be simply dropped. It included the primary information in the least number of words possible while also indicating rewards for being in it. Also followed up with suggestions which is a good touch considering I did not ask for any follow-up like that.

Office Chair Prompt V1: *"Write a product description for an ergonomic office chair."*
Response: *"**Ergonomic Office Chair***

Built for long workdays, this chair keeps you comfortable at hour eight, not just in the first ten minutes.

The adjustable lumbar support follows the curve of your lower back, so you stop slouching without having to think about it. The breathable mesh back keeps air moving and you stay cool. The seat is high-density foam with a waterfall front edge, which takes pressure off the backs of your thighs and helps circulation.

You can adjust almost everything:

- ***Seat height and depth** to fit your legs and desk*
- ***4D armrests** that move up, down, forward, back, and pivot, so your shoulders stay relaxed while you type*

- ***Adjustable headrest*** *for when you lean back on calls*
- ***Synchro-tilt recline*** *with tension control and a lock at multiple angles, so the seat and backrest move together*

The frame is steel-reinforced, the base is heavy-duty, and the casters roll smoothly on carpet or hard floors. It supports up to 300 lbs. Assembly takes about 15 minutes, and every tool you need is in the box.

It's a good fit for remote workers, gamers, students, and anyone who spends most of the day sitting.

I invented the specs (300 lb capacity, 4D arms, mesh back). Send me the real ones, the price range, and where this is going (Amazon, Shopify, your own site) and I'll rewrite it to match. Amazon listings, for example, work better with bullet-heavy copy and keywords up front."

General Thoughts: I think the overall idea of the response is pretty solid and covers all parts of the chair but again I did only ask for a product description… which is what is delivered. Like all of the other prompts, it did not upfront ask me for information about the chair but rather came up with imaginary stats.

Office Chair Prompt V2: *"You are a marketing agency for an office chair company called Herman Miller. You are now writing a product desciprion for the official website on the new Herman Miller x Logitech Embody Gaming Chair. You can use official sources for product specifications.*

I am going to give some options that you can test and give me some examples, and we will move forward with creating the final form of the description.

Option 1:

Tech savvy, luxury theme / high end comfrt. Pull in those from outside of gaming as well while keeping it tech strong.

Option 2: Kid friendly, PG13 themed to remain visually appealing for all ages.

Option 3: Dark themed, lots of metaphors to replace parts of the chair with wild technology. Keep people intrigued.

You should give me small examples of each, no final pieces yet.

Output:

Ensure output is under 500char while containing all information about the chair. (except the option examples)

Refrain from using common AI words / phrases."

Techniques Used:
Role Prompting – Few-shot Prompting – Output Format

Response 1: *"I'll pull the current official specs first, then draft a short sample for each direction.*

Here's a sample of each direction. Every one includes the same core specs and stays under 500 characters (counts in brackets).

***Option 1: Tech-forward luxury** [463]*

Built with Logitech G, Embody pairs Herman Miller seating science with pro-level play. Pixelated Support moves with you while copper-infused cooling foam in the seat and back holds you upright and cool for hours. Dial in Backfit, tilt tension, seat height (16-20.5") and depth (15-18"), plus arms that adjust in height and width. Rated to 300 lbs, ships fully assembled, backed by a 12-year warranty. Equally at home in the studio, the office, or ranked at 2 a.m.

***Option 2: All-ages / PG-13** [414]*

Meet the chair that keeps up with every level. Embody, made with Logitech G, has tiny pixel-like supports that shift as you move, plus cooling foam in the seat and back so you stay comfy and sitting tall. Change the seat height (16-20.5"), seat depth (15-18"), back fit, tilt, and arm height and width to fit you. Holds up to 300 lbs, shows up fully built, and has a 12-year warranty. Homework, game night, repeat.

***Option 3: Dark, metaphor-heavy** [422]*

Lights off. Embody wakes up. Built with Logitech G, its spine is a field of pixels that reads every shift and answers back. Copper-laced cooling foam pulls heat from seat and back, locking you upright for the long haul. Tune Backfit, tilt, seat height (16-20.5"), depth (15-18"), and arms in height and width. Rated to 300 lbs. Arrives fully assembled. Backed by 12 years. The rig isn't on your desk. You're sitting in it.

What I left out:

- ***Price:** It changes by region and sale, so it's best kept out of the copy. The US list price is $2,255 at DWR right now, and the EU store has it at €2,001.*

- ***Colorways:*** *I dropped them to stay under 500 characters. The current lineup is Cyan, Black, Amethyst, Galaxy, Ignite and Nova.*

If you want either one in the copy, I can cut something else to make room.

Spec sources:

- *Herman Miller EU product details: 300 lb (136 kg) capacity, 12-year warranty, no assembly needed, adjustable arms*
- *DWR: weight limit and adjustments*
- *Logitech G: cooling foam in the seat and back*
- *Herman Miller EU store: colors*
- *Alfrensia spec listing: seat height and depth ranges. This one isn't official, so the numbers should be checked against Herman Miller's spec sheet before anything goes live.*

Which direction do you want to take forward, or should I combine parts of two?"

Prompt 2: "Option 3."

Response 2: "Here's the final Option 3 description. It comes to 440 characters.

Lights off. Embody wakes up. Built with Logitech G, its spine is a grid of pixels that reads every shift and pushes back. Copper-laced cooling foam bleeds heat from seat and back, holding you upright deep into the night. Recalibrate Backfit, tilt tension, seat height (16-20.5"), seat depth (15-18"), and arm height and width. Rated to 300 lbs. Arrives fully assembled. Backed for 12 years. The rig isn't on your desk. You're sitting in it.

Changes from the sample:

- **Back support:** "a field of pixels" became "a grid of pixels," which sounds more like hardware.
- **Cooling foam:** "pulls heat" became "bleeds heat," and "for the long haul" became "deep into the night" to keep the dark tone going.
- **Adjustments:** "Tune" became "Recalibrate," and "seat depth" is written out in full so it can't be misread.
- **Warranty:** "Backed by 12 years" became "Backed for 12 years," which reads more naturally.

There are 60 characters to spare, enough to add a short colorway line like “In Cyan, Black, Amethyst, Galaxy, Ignite and Nova.” The seat height and depth ranges still came from an unofficial listing, so check them against Herman Miller’s spec sheet before this goes live.”

General Thoughts:

I don’t like how long the initial response was although I did provide it a lot of information at once and expected 3 examples, it still seemed to put a lot of words into each instead of giving examples to begin. In the end, the final option 3 description was solid and it hit exactly the points I wanted while following the constraints too.

Analysis:

Throughout all of the prompts I sent to Claude, I used all the provided techniques to ensure I received detailed and direct responses.

From the list, I used all 5:

- Role Prompting
- Context
- Constraints
- Few-shot Prompting
- Output Format

Each technique had its own way of entirely changing the direction from prompt one to prompt two. Every original prompt including only a few words, Claude had the same instinct each time to follow the same format…
Title -> Slogan/Hook -> Information on product -> Final add-ons -> Relate to reader -> Suggestions

Honestly, it is a pretty well-structured general response as it includes all of the normal asked information on a product description.

After sending over a more detailed prompt, Claude completely ditched its standard procedure and listened to the prompt and followed the rules. The char limits were followed and delivered in one case 60 char less than I asked and then 11 less another time. Although I gave the LLM exactly what it was I wanted for an output. It still decided to give me suggestions at the end of each response without me asking. I think this is good practice to keep users improving their work but also, I gave it what I wanted and its still trying to add its spin to it. Overall, tailoring the prompt led to much better responses, though not perfect ones. Claude dropped the chair’s price and colors to fit the 500 character limit even though

I asked for all the information, and in Water Bottle V3 it copied ‘Three sizes. Twelve colors’ straight from my examples, even though those aren’t real specs.

I think the technique that did the most for me was context. Giving real specs, an audience, and a platform (Water Bottle V2, Coffee V2, Chair V2) stopped Claude from inventing details and made the output fit where it was going. The office chair is the best example. Not only did Claude listen to my input and supply me with the three different styled responses but it also did research on its own to fill the gaps on the information I left out (intentionally (color, size, weight limit, etc.) to see what it would pull from the internet).
The responses for each option before even arriving to the final product were each written very well and followed alongside the theme I asked for.

I did ask in the prompt for Claude to not send the final form during the option examples and what I noticed was not the best…

Once I decided I want to move forward with option 3, it didn’t rewrite a new styled one or even try to create a new plot. Instead, it took the example 3 and changed 3-4 words throughout to make it “different”.

I think this is AI being lazy to just give something rather than refer back and deliver even better… It would need a second prompt to remind it not to repeat or use examples, which can lead to hallucinations. To fix this, I would send a follow-up prompt like: “Rewrite Option 3 from scratch. Keep the dark theme and the same specs, but don’t reuse any sentences or metaphors from the sample. Stay under 500 characters.” That forces it to build a new version instead of swapping out a few words. Going forward, I’d also add a line to the original prompt saying the final version must be written fresh and not be an edit of the sample.
