Customer Review Sorter

Diego Medina

Prompt engineering assignment 02

This write-up compares three prompts used to classify 110 customer reviews. Clear categories and a required table turned the initial summary into individual results.

Part 1 Prompt Log

Version 1

Prompt

Are these reviews positive or negative?

Output

These reviews include both positive and negative feedback, along with mixed and neutral comments.

Sentiment	Examples
Positive	R006 praises clear calls and battery life. R017 praises backpack durability. R102 calls it the best throw blanket they've owned.
Negative	R003 reports a charging failure. R048 reports a leaking kettle. R100 says the bulbs stopped working.
Mixed	R060 praises battery life but criticizes the microphone. R071 likes the blanket's comfort but reports shrinkage.
Neutral / questions	R012 asks about compatibility. R067 asks about laptop size. R094 describes an unopened gift.

Some reviews are sarcastic negatives: R022's "Ten stars" and R108's "Truly impressive engineering" express dissatisfaction despite the positive wording.

Overall, the feedback varies: customers praise comfort, convenience, and value, while complaints often concern durability, reliability, and product quality.

Coverage note: This response summarized the reviews and gave examples. It did not assign an individual label to every review.

Version 2

Prompt

Classify each review in the attached product-reviews.csv using these labels:

- Positive: Expresses satisfaction or praise without a clear complaint.
- Negative: Expresses dissatisfaction or a complaint without clear praise.
  Sarcastic praise that actually expresses dissatisfaction is Negative.
- Mixed: Contains both clear praise and a clear complaint, including
  problems that were later resolved.
- Neutral: Contains no clear positive or negative opinion, such as a
  question, an unopened gift, or "not bad, not great."

Return a table with these columns:
review_id | sentiment | reason

Give each review exactly one label and keep reasons under 10 words.
Include all 110 reviews in their original order, preserving their IDs.
Do not replace individual results with a summary.

Version 2 Output

First 20 rows of the model's output are reproduced below.

review_id	sentiment	reason
R001	Negative	Chemical smell required a week of airing out.
R002	Mixed	Decent isolation, misleading description, good for gym.
R003	Negative	Charging failed; support never responded.
R004	Negative	Uncomfortable straps prompted return.
R005	Mixed	Insufficient winter warmth, acceptable decorative use.
R006	Positive	Praises call clarity and battery life.
R007	Mixed	Good value, unsuitable for serious backpacking.
R008	Mixed	Bright colors, recurring Wi-Fi disconnections.
R009	Mixed	Great bulbs, terrible app and difficult setup.
R010	Positive	Repeat purchase with lasting reliability.
R011	Negative	Arrived stained.
R012	Neutral	Asks about smart assistant compatibility.
R013	Mixed	Failed initially; replacement currently works.

R014	Mixed	Arrived dented; prompt replacement and acceptable performance.
R015	Negative	Capacity smaller than listing suggests.
R016	Neutral	Secondhand assessment offers no clear enthusiasm or complaint.
R017	Positive	Praises exceptional durability in harsh conditions.
R018	Negative	Colors appear washed out.
R019	Negative	Seller shipped wrong size.
R020	Mixed	Incorrect color, but still a good bag.

Coverage note: The complete output included all 110 reviews, R001–R110, with no missing or repeated IDs.

Version 3

Prompt

You are a customer feedback analyst for an online retailer.

Classify each review in the attached product-reviews.csv using these labels:

- Positive: Expresses satisfaction or praise without a clear complaint.
- Negative: Expresses dissatisfaction or a complaint without clear praise.
  Sarcastic praise that actually expresses dissatisfaction is Negative.
- Mixed: Contains both clear praise and a clear complaint, including
  problems that were later resolved.
- Neutral: Contains no clear positive or negative opinion, such as a
  question, an unopened gift, or "not bad, not great."

Examples:
"Easy to use and works perfectly." -> Positive
"Wonderful, the screen broke on the first day." -> Negative
"Comfortable shoes, but the sole wore out quickly." -> Mixed
"It arrived broken, but support replaced it and it works well." -> Mixed
"Does this come in blue?" -> Neutral
"Not bad, not great." -> Neutral

Return a table with these columns:
review_id | sentiment | reason

Give each review exactly one label and keep reasons under 10 words.

Include all 110 reviews in their original order, preserving their IDs.
Do not replace individual results with a summary.

Version 3 Output

First 20 rows of the model's output are reproduced below.

review_id	sentiment	reason
R001	Negative	Chemical smell required a week of airing out.
R002	Mixed	Decent isolation and gym use, but misleading description.
R003	Negative	Charging failed; support never responded.
R004	Negative	Uncomfortable straps prompted return.
R005	Mixed	Inadequate winter warmth, acceptable as decoration.
R006	Positive	Praises clear calls and reliable battery.
R007	Mixed	Good value, unsuitable for serious backpacking.
R008	Mixed	Bright and colorful, but disconnects frequently.
R009	Mixed	Great bulbs, terrible app and troublesome setup.
R010	Positive	Repeat purchase with yearlong reliability.
R011	Negative	Arrived stained.
R012	Neutral	Asks about voice assistant compatibility.
R013	Mixed	Original failed; replacement currently works.
R014	Mixed	Arrived dented; promptly replaced and performs adequately.
R015	Negative	Smaller capacity than listing suggests.
R016	Neutral	Secondhand "fine" conveys no clear praise or complaint.
R017	Positive	Praises durability through harsh outdoor conditions.
R018	Negative	Colors appear washed out compared with competitors.
R019	Negative	Seller sent wrong size.

R020	Mixed	Color differs from photos, but bag is good.

Coverage note: The complete output included all 110 reviews, R001–R110, with no missing or repeated IDs. All sentiment labels matched Version 2.

Part 2 Spot Check Table

I selected 10 reviews, including sarcasm, mixed opinions, and unclear comments, and assigned my own labels. The table compares my labels with Version 3.

Review ID	My label	Version 3 label	Agree
R027	Positive	Positive	Yes
R030	Negative	Negative	Yes
R041	Mixed	Mixed	Yes
R043	Neutral	Neutral	Yes
R059	Mixed	Mixed	Yes
R065	Negative	Negative	Yes
R067	Neutral	Neutral	Yes
R078	Negative	Negative	Yes
R089	Positive	Positive	Yes
R105	Mixed	Mixed	Yes

All 10 of my labels matched Version 3. R043 was Neutral because it described basic performance without clear praise or a complaint. R089 was Positive because “looks nice” expresses praise, even though the customer had only just received it. R105 was Mixed because it combines praise with a complaint about color choices. No disagreements required another prompt revision.

Part 3 Analysis

I started with a basic prompt asking whether the reviews were positive or negative. The response summarized the feedback and gave examples, but did not label every review.

In Version 2, I added category definitions, a table format, and rules requiring one label per review and short explanations. This produced organized results for all 110 reviews.

In Version 3, I added a customer feedback analyst role and examples of sarcasm, mixed opinions, and neutral comments. The labels stayed the same as Version 2, so these additions did not noticeably improve the classifications in this run.

The model identified sarcastic complaints like R022 as Negative, questions like R012 as Neutral, and praise with complaints like R055 as Mixed. Both improved versions included every review from R001 through R110, so no continuation was needed.

The category definitions and table format made the biggest difference because they turned a general summary into results that could be sorted and counted. Since I added several instructions together in Version 2, I could not separate their individual effects. All 10 of my spot-check labels matched Version 3, though this small sample does not establish accuracy across the entire file.
